*"This database is designed for an e-commerce platform that connects sellers and customers through an online marketplace. It contains essential datasets related to orders, products, customers, and ordered items.."*

## Problem 1: Lost Order History 📦

### Scenario:

**John Doe**, a long-time customer, claims he has placed several orders but can't find any record of them in her account. He is frustrated and wants a list of all orders he has placed in the past, including **order date** and **status**, to verify.

**Problem:**

Help him by writing an SQL query to retrieve her order history.
