DATA ODYSSEY

"This database is designed for an e-commerce platform that connects sellers and customers through an online marketplace. It contains essential datasets related to orders, products, customers, payments, deliveries, and reviews. The database helps in tracking sales performance, customer behavior, shipping efficiency, and seller ratings."

DATABASE SCHEMA

Problem 8: Products with No Orders

Scenario:

The inventory management team is analyzing the product database to find items that have never been sold. This will help them decide whether to remove or promote those products.

Problem:

List all products that have never been ordered. Display only the product ids.

No output needed!
