# DATA ODYSSEY

"This database is designed for an e-commerce platform that connects sellers and customers through an online marketplace. It contains essential datasets related to orders, products, customers,and ordered items.."

Problem 7. The Marketplace's Biggest Spender 💳

The platform wants to reward its most valuable customer—**the one who has spent the most money on orders**. Your job is to find out who this customer is and how much they have spent in total.

Problem:
Write a query to determine the marketplace's top spender

```
+-------------+------------+--------------------+
| customer_id | name       | total_money_spent  |
+-------------+------------+--------------------+
|           2 | Jane Smith |            1654.74 |
+-------------+------------+--------------------+
```
